

Assessing Progress on the Institute of Medicine Report *The Future of Nursing*

In 2010, the Institute of Medicine (IOM) released a landmark report, *The Future of Nursing: Leading Change, Advancing Health*, that addressed the crucial role of nurses in a rapidly evolving health care landscape. Shortly after the release of this report, the Robert Wood Johnson Foundation (RWJF), in partnership with AARP, launched the Future of Nursing: Campaign for Action (the Campaign). The Campaign has since worked at the national and state levels to shepherd the report's recommendations.

RWJF asked the IOM to convene a committee to examine changes in the field of nursing since the release of *The Future of Nursing* report and to assess progress made in implementing the report's recommendations. The resulting report, *Assessing Progress on the Institute of Medicine Report The Future of Nursing*, offers recommendations that provide a blueprint for the Campaign and other stakeholders to accelerate implementation of *The Future of Nursing* recommendations.

CONTEXT

The more than 3 million registered U.S. nurses make up the largest segment of the nation's health care system. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and they provide a continuum of services including direct patient care, health promotion, patient education, and coordination of care.

The Affordable Care Act created new health care delivery and payment models that emphasize teamwork, care coordination, value, and prevention: models in which nurses can contribute a great deal of knowledge and skill. Indeed, the nursing profession is making a wide-reaching impact by providing quality, patient-centered, accessible, and affordable care. The 2010 report issued a number of recommendations aimed at helping to ensure that nurses are prepared to help fill the need for quality health care in a fundamentally shifting care delivery system.

The Campaign and many other stakeholders have worked to prepare nurses for new and vital roles. The current committee finds that the Campaign has made significant

progress in many aspects of its work in a short period of time. For continued progress, work in specific areas, as outlined below, requires more focus and attention.

AREAS OF RECOMMENDATION

In a changing health care culture and landscape, with increasing importance placed on interprofessional collaboration, the Campaign, the field of nursing, and stakeholders in other professions working to improve health care delivery can continue to make significant contributions by addressing challenges in the areas of health care delivery and scope of practice, education, collaboration, leadership, diversity in the nursing profession, and workforce data.

Removing Barriers to Practice and Care

The 2010 report proposed that Advanced Practice Registered Nurses (APRNs), if permitted to practice to the full extent of their education and training, could help build the workforce necessary to satisfy the health care needs of an increasing number of people with access to health insurance and contribute their unique skills to the delivery of patient-centered health care. Steps have been taken at both the federal and state levels, but barriers to expanding APRN scope of practice remain.

Collaborative models of practice, in which all health professionals practice to the full extent of their education and training, optimize the efficiency and quality of care for patients and enhance the satisfaction of health care providers. The committee recommends that the Campaign work with other health professions groups, policy makers, and the nursing community to build common ground around removing scope of practice restrictions and increasing interprofessional collaboration to improve health care practice in the interest of patients.

Transforming Education

Transformation in the health care system and practice environments requires a corresponding transformation of nursing education. For nurses to be prepared to meet increasingly complex patient needs, function as leaders, and advance science, they should achieve higher levels of education, at the time they enter into the profession and throughout their careers. For this reason, the committee recommends expanding educational opportunities, including efforts to: (1) support academic pathways toward the baccalaureate degree; (2) explore ways to create and fund transition-to-practice residency programs; (3) promote the pursuit of doctoral degrees, with an emphasis on the Ph.D.; and (4) promote interprofessional and lifelong learning.

Collaborating and Leading

Nurses are needed to lead and participate in ongoing reforms to the health care system, to direct research on evidence-based improvements to care, to translate research findings into practice, to be full partners on the health care team, and to advocate for policy change. Nurses in leadership positions contribute their unique perspective and expertise on issues such as health care delivery, quality, and safety. The committee recommends that the Campaign work to expand efforts and opportunities for interprofessional collaboration and leadership development. The Campaign also should encourage nurses to serve in executive and leadership positions—including those at health care systems, insurance companies, government agencies, and advisory committees—such that they may be involved in the redesign of health care delivery and payment systems.

Promoting Diversity

The 2010 report identified lack of diversity as a challenge for the profession and indicated that a more diverse

No single profession, working alone, can meet the complex needs of patients and communities. Nurses should continue to develop skills and competencies in leadership and innovation and collaborate with other professionals in health care delivery and health system redesign.

workforce would help better meet current and future health care needs and provide more culturally relevant care. The Campaign has made diversity one of its pillars, and nationwide, many stakeholder organizations in health care, education, and government have taken steps to increase the diversity of the nursing workforce and that of the health professions more broadly. The committee recommends that the Campaign continue to prioritize diversity and implement a series of actions to promote it.

Improving Data

There are major gaps in understanding numbers and types of health professionals, where they are employed, and what roles they fill. Yet this knowledge is critical to support new models of health care delivery and improve patient care. The committee recommends that the Campaign use its strong brand and partnerships to help improve data collection. The Campaign should play a role in convening, supporting, and promoting collaboration among organizations and associations to consider how they might create more robust data sets and how certain data sets can be organized and made available to researchers, policy makers, and planners. The federal government and states also should play a role by expanding existing data collection activities to better measure and monitor the role of nurses in the health care workforce.

CONCLUSION

No single profession, working alone, can meet the complex needs of patients and communities. Nurses should continue to develop skills and competencies in leadership and innovation and collaborate with other professionals in health care delivery and health system redesign. To continue progress on the implementation

of *The Future of Nursing* recommendations and to effect change in an evolving health care landscape, the nursing community, including the Campaign, must build and strengthen coalitions with stakeholders both within and outside of nursing. The committee hopes that its recommendations will help the Campaign and other organizations as they work to improve access to quality health care for all. ♦♦
